Product Description

Ultrasonic Cleaner for Precision Hardware Parts 15L Ultrasonic Bath
An ultrasonic cleaner is a device that cleans items by using ultrasound and water or an appropriate cleaning solvent.
Also, it can be said to be a machine that offers the complete and rapid removal of dirt, germs, and other contaminants from items that are put in a tank of water that is agitated with sound waves having a high frequency.
Every ultrasonic cleaner is not constructed to be equal. There are some with bigger sizes, while you can also get a portable ultrasound machine.
They all serve the same purpose, which is cleaning, but they sometimes meet different, specific needs.
